

WHAT IS CLAIMED IS:

1. A disk drive comprising:
a main unit which comprises a disk-driving unit for rotating a disk, a
data-reproducing unit for reproducing data from the disk, and a drive unit for moving the
5 data-reproducing unit relative to the disk; and
an outer case which has a horizontal plate opposing the main unit and an inclined
plate extending from a rear edge of the horizontal plate, gently inclining and covering the
rear part of the main unit.
2. The disk drive according to claim 1, wherein the main unit comprises
10 connectors to which cables are to be detachably connected for supplying power and
signals to the disk drive from external apparatuses and vice versa, the inclined plate is
located in the vicinity of the connectors, and data items about the connectors are indicated
on the inclined plate.
3. The disk drive according to claim 1, wherein the horizontal plate is a top
15 wall which covers the main unit from above, the inclined plate has been formed by
bending downward a plate which is integral with the horizontal plate.
4. The disk drive according to claim 1, wherein the inclined plate is a flat
plate.
